

# One Cage 2100™

## Interchangeability and Species Flexibility!

The most convenient high density housing ever . . .

For Rats, Mice, Hamsters and Guinea Pigs:

Two Species-flexible™ Cage Sizes. One Rack. Providing the ultimate in convenience and cost effectiveness, the One Cage 2100™ system is the most flexible high density housing ever designed. Place two different cage sizes on a single rack, the larger One Cage 2100™ (210 square inch floor area) and the original One Cage™ (80 square inch floor area) simultaneously, without any changes to the rack!

The One Cage 2100™ Micro-Isolator™ provides a spacious interior for housing 14 mice (>25 g), 5 rats (400 g), 3 rats (>500 g), 11 hamsters (>100 g) or 2 guinea pigs (>350 g) in one universal design. A clear plastic Modular Diet Delivery System accepts either two Hydropac™ water pouches or two water bottles and quickly adapts for various species with snap-on feeder components. The "no wire bar lid" design allows faster cage changes and easier observations of animals, food and water. Dual cage locks fasten the filter top to the cage for added security during removal and transport.

House up to 64 larger cages, 128 smaller cages or any combination in between! Position cage sizes as you like, from top to bottom, front to back, every other row or any configuration that meets your needs. Free your facility from having to maintain inventory of many different types, sizes and styles of cage and rack systems. What's more, your research studies can benefit from LifeSpan™ rodent enrichment in either cage while keeping your animals happier, healthier and drier.

AllerZone™ technology is **\*Independently Tested and Certified**. The One Cage 2100™ and the original One Cage™ include AllerZone™ technology, creating a separate pressure zone between the cage and the room, while preventing cage air from escaping to the room and room air from entering the cage. The positive pressure cage protects animals with HEPA filtered air, and airflow of the negative pressure rack directs animal dander, particulate, and odors away from personnel, providing allergen control. AllerZone™ is independently tested for containment of Mouse Urine Protein (M.U.P.) and SF<sub>6</sub> Tracer Gas.

- Maximizes housing capacity and flexibility
- Two Species-flexible™ interchangeable cages
- Accepts Hydropac™ water pouches
- Reduces inventory levels
- Eliminates old style wire bar lids
- Allows faster cage changes
- Provides easier observations
- Precise airflow balance
- Helps control airborne allergens
- Meets ILAR Guide recommendations

**Reduce inventory and increase flexibility with the revolutionary One Cage 2100™.**
